PRESIÓN ARTERIAL EN NIÑOS Y ADOLESCENTES

Responsabilidad Social Empresarial (R.S.E.)

APUESTA A TU SALUD

Dr. Edgardo Rienzi

LA PRESIÓN ARTERIAL EN NIÑOS Y ADOLESCENTES

En las 2 primeras tablas a continuación, se presentan los valores de Presión Arterial en los percentiles 50 (normales), 90, 95 y 99 (elevados) para niñas y varones de 1 a 17 años de edad, según diferentes percentiles de estatura (5, 10, 25, 50, 75, 90, y 95), dado que a estas edades, la Presión Arterial está influida por la talla del sujeto.

A su vez, las Tablas III y IV presentan los valores de percentiles (5, 10, 25, 50, 75, 90 y 95) para estatura en niñas y varones de 2 a 20 años de edad, de modo de saber en qué columna de percentil debemos ubicar el valor tanto de PA sistólica como diastólica, para evaluar las cifras de un niño o adolescente en particular.

La edad, en las Tablas III y IV está expresada en meses.

El control de la Presión Arterial es una herramienta de Prevención muy sencilla y accesible, y su uso debe aplicarse desde los primeros años de vida. Cuando lleva a su hijo a algún control, no deje de solicitarle a su médico le mida la Presión Arterial. Esta medida es más relevante aún, si existen antecedentes de Hipertensión Arterial en la familia.
